

Concrete Staining

We offer a wide range of finishes and coatings, producing stunning results for interior and exterior applications. Every stained concrete coating is a true work of art. Custom colored to your unique specifications, we apply stained overlays in a variety of colors and styles. All installations are fully sealed, distinct, durable and require little maintenance.

Stylish Concrete Expertly Installed

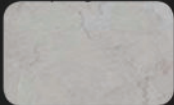

The key to creating the ideal color for your concrete stain is to start with a coat of white. Otherwise, the gray base of concrete can throw off the color. We create a sample board as a proof prior to our installation. As a final step, we seal everything to ensure stain, fade and scratch resistance.

Perfect for both residential and commercial applications, interior and exterior concrete installations are in demand. Due to the affordability, unique look and resilience, concrete staining has become increasingly popular. Our unique blend of chemistry and artistry allow for a long lasting, impervious surface and stunning appearance. We offer a range of products to enhance your particular project. Recognized as the leader in the industry, we continue to expand our solutions to counteract environmental concerns and improve results.

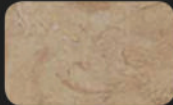

We are respected as the authority in concrete coatings and staining projects. Our quality installations utilize proven systems, which guarantee successful performance under any condition.
